master the art of data munging and predictive modeling for machine learning with scikit learn
key features comprehensive coverage of complete predictive modeling lifecycle from data munging to deployment
gain insights into the theoretical foundations underlying powerful machine learning algorithms
master python's versatile

scikit learn library for robust data analysis book description ultimate machine learning with scikit learn is a definitive resource that offers an in depth exploration of data preparation modeling techniques and the theoretical foundations behind powerful machine learning algorithms using python and scikit learn beginning with foundational techniques you ll dive into essential skills for effective data preprocessing setting the stage for robust analysis next logistic regression and decision trees equip you with the tools to delve deeper into predictive modeling ensuring a solid understanding of fundamental methodologies you will master time series data analysis followed by effective strategies for handling unstructured data using techniques like naive bayes transitioning into real time data streams you ll discover dynamic approaches with k nearest neighbors for high dimensional data analysis with support vector machines svms alongside you will learn to safeguard your analyses against anomalies with isolation forests and harness the predictive power of ensemble methods in the domain of stock market data analysis by the end of the book you will master the art of data engineering and ml pipelines ensuring you re equipped to tackle even the most complex analytics tasks with confidence what you will learn master fundamental data preprocessing techniques tailored for both structured and unstructured data develop predictive models utilizing a spectrum of methods including regression classification and clustering tackle intricate data challenges by employing support vector machines svms decision trees and ensemble learning approaches implement advanced anomaly detection methodologies and explore emerging techniques like neural networks build efficient data pipelines optimized for handling big data and streaming analytics solidify core machine learning principles through practical examples and illustrations table of contents1 data preprocessing with linear regression 2 structured data and logistic regression 3 time series data and decision trees 4 unstructured data handling and naive bayes 5 real time data streams and k nearest neighbors 6 sparse distributed data and support vector machines 7 anomaly detection and isolation forests 8 stock market data and ensemble methods 9 data engineering and ml pipelines for advanced analytics index

plastic strain is considered a consequence of slipping on some of the 12 slip systems of facecentered cubic single crystals the polycrystal is assumed to be macroscopically homogeneous and initially isotropic that is the crystal orientations sizes shapes and locations are random and uncorrelated the rotations of the grains during deformation are neglected and the average plastic strain in grains of a given orientation is calculated on the basis of the assumption that the grains under consideration are spherical and elastically isotropic author

this book is about building platforms for pandemic prediction it provides an overview of probabilistic prediction for pandemic modeling based on a data driven approach it also provides guidance on building platforms with currently available technology using tools such as r shiny and interactive plotting programs the focus is on the integration of statistics and computing tools rather than on an in depth analysis of all possibilities on each side readers can follow different reading paths through the book depending on their needs the book is meant as a basis for further investigation of statistical modelling implementation tools monitoring aspects and software functionalities features a general but parsimonious class of models to perform statistical prediction for epidemics using a bayesian approach implementation of automated routines to obtain daily prediction results how to interactively visualize the model results strategies for monitoring the performance of the predictions

and identifying potential issues in the results discusses the many decisions required to develop and publish online platforms supplemented by an r package and its specific functionalities to model epidemic outbreaks the book is geared towards practitioners with an interest in the development and presentation of results in an online platform of statistical analysis of epidemiological data the primary audience includes applied statisticians biostatisticians computer scientists epidemiologists and professionals interested in learning more about epidemic modelling in general including the covid 19 pandemic and platform building the authors are professors at the statistics department at universidade federal de minas gerais their research records exhibit contributions applied to a number of areas of science including epidemiology their research activities include books published with chapman and hall crc and papers in high quality journals they have also been involved with academic management of graduate programs in statistics and one of them is currently the president of the brazilian statistical association
