deal with the matter but shall refer to it again in my chapter on the distribution of weight for this matter of the distribution of weight which is of absolute root importance in the game of golf has been most persistently mistaught by those whose duty it is to teach the game as they play it so that others may not be hampered in their efforts to become expert by following false advice of course they begin to turn over much sooner than this but the truth is that the turn over of the wrist or more correctly speaking the roll of the forearms in the downward swing is such a wonderfully gradual and natural process that it would be utterly impossible for anyone to say at what particular period in the downward swing it happens and if anyone can say or rather does say at what particular period the wrists come in to the downward stroke he is not only an ignorant golfer but an enemy to golf for it is a matter which cannot be described except to say that the wrist action begins absolutely with the beginning of the stroke and is then a continuous and natural turn until the club gets very close to the ball by which time there is practically nothing left for the wrists to do as the club has reverted to the position in which it was at the moment of address or perhaps i should say that it ought to have reverted to that position as indeed in so far as regards the club itself is properly shown by james braid in his photographs of stance and address and impact
