master s thesis from the year 2019 in the subject biology micro and molecular biology  
 grade 4 arba minch university course medical microbiology language english abstract the  
 aim of this study was to determine the antibacterial activity of crude extracts of four  
 medicinal plants a pirottae g schweinfurthii k begoniifolia and u leptocladon against atcc  
 and mdr clinical isolates of bacteria based on ethnobotanical data four plants were  
 collected from different areas of south omo through several field trips followed by  
 taxonomic identification leaves a pirottae k begoniifolia and u leptocladon and root g  
 schweinfurthii parts of plants specimens were subjected to extraction process using six  
 different organic solvents through maceration and subsequent filtration the resultant  
 crude extracts were screened for primary in vitro antibacterial activity against atcc  
 bacterial strains using agar well diffusion assay the plants that showed the highest  
 activity indices were further screened against mdr bacterial isolates mic was performed  
 on the most active plant extract results of antibacterial activities were analyzed using  
 statistical software spss for windows version 20 the antibacterial activity significantly  
 varied among the plant species type of solvents used for the extraction and strains of  
 bacteria tested ethyl acetate and ethanol was highly effective for extracting antibacterial  
 principles irrespective of plant species the results of primary screening revealed that two  
 plants k begoniifolia and u leptocladon were highly active against atcc strains the results  
 of the extended screening showed that among the two plants ethyl acetate extract of u  
 leptocladon efficiently inhibited the growth of mdr bacterial isolates the mic values of u  
 leptocladon were varied in inhibiting mdr bacteria tested the overall findings of this  
 study demonstrated that all the four plants have antibacterial activities in varying degrees  
 u leptocladon showed the widest and highest spectrum of antibacterial activities as per  
 agar well diffusion assay and analysis of mic however further ongoing and in depth

studies are mandatory in order to prove and understand in vivo efficacy mechanism of action and toxicological profile of these plants in many regions of the world particularly ethiopia the vast majority of traditional medicines are plant based however these plants were neglected and scarcely explored therefore screening of plants used in traditional medicine could provide the chance of discovering antimicrobials that fight against infectious diseases
