the evolution of the weatrck system is described from the original software obtained under contract in 1977 to the present software configuration the various portions of the software are discussed with emphasis on the algorithms used to determine storm significance and establish the storm track results of the two year development effort and operational tests show the usefulness of assimilating large amounts of complex data and generating a computer synthesized product easily used in forecast applications the error analysis performed on the storm track forecast accuracy suggests that few of the errors encountered are due to meteorological effects but they are largely due to parameters such as beam width pulse width antenna rotation rate and rounding errors the non meteorological errors appear to average out over large data sets that is the longer the storm track the smaller the forecast error although the program now uses a three dimensional analysis very little analysis is performed on the velocity and variance fields the usefulness of these fields along with other improvements are considered

the 2nd international tagging and tracking symposium was held in san sebastian spain in october 2007 seven years after the first symposium was held in hawaii in 2000 sibert and nielsen 2001 in the intervening seven years there have been major advances in both the capability and reliability of electronic tags and analytical approaches for geolocation of tagged animals in marine habitats advances such as increased data storage capacity sensor development and tag miniaturization have allowed researchers to track a much wider array of marine animals not just large and charismatic species importantly data returned by these tags are now being used in population analyses and movement simulations that can be directly utilized in stock assessments

and other management applications papers in this volume are divided into three sections the first describing insights into behavior achieved using acoustic archival and novel tags the second reporting on advances in methods of geolocation while the final section includes contributions where tag data have been used in management of marine species accurate documentation of animal movements and behaviors in critical marine habitats are impossible to obtain with other technologies the management and conservation of marine species are critical in today s changing ocean environment and as electronic tags become more accurate and functional for a diversity of organisms their application continues to grow setting new standards in science and technology
