this book highlights applications that include machine learning  
methods to enhance new developments in complex and unmanned  
systems the contents are organized from the applications  
requiring few methods to the ones combining different methods and  
discussing their development and hardware software implementation  
the book includes two parts the first one collects machine  
learning applications in complex systems mainly discussing  
developments highlighting their modeling and simulation and  
hardware implementation the second part collects applications of  
machine learning in unmanned systems including optimization and  
case studies in submarines drones and robots the chapters discuss  
miscellaneous applications required by both complex and unmanned  
systems in the areas of artificial intelligence cryptography  
embedded hardware electronics the internet of things and  
healthcare each chapter provides guidelines and details of  
different methods that can be reproduced in hardware software and  
discusses future research features provides details of  
applications using machine learning methods to solve real  
problems in engineering discusses new developments in the areas  
of complex and unmanned systems includes details of hardware  
software implementation of machine learning methods includes

examples of applications of different machine learning methods for future lines for research in the hot topic areas of submarines drones robots cryptography electronics healthcare and the internet of things this book can be used by graduate students industrial and academic professionals to examine real case studies in applying machine learning in the areas of modeling simulation and optimization of complex systems cryptography electronics healthcare control systems internet of things security and unmanned systems such as submarines drones and robots

the convergence of wireless communication and the internet is one of the strongest emerging markets in the telecommunications industry this book consists of a compilation of papers on key issues related to 3g and 4g wireless communications and wireless access to next generation internet ngi included in multiaccess mobility and teletraffic for wireless communications volume 5 are new results on space time access schemes that can dramatically increase the achievable bit rates of wireless systems perhaps approaching bandwidth efficiencies in the order of 10 bits s hz the book also considers broadband wireless access to ngi effective management of radio resources in wireless systems is necessary for high spectral efficiency and to support mobility this book treats issues relating to handoff and channel assignment in cellular frequency reuse systems in order to achieve quality of service qos expectations in a dynamically changing wireless environment effective error and qos control protocols are needed to guarantee fairness in the access to resources medium access control mac protocols are needed optimization of network resources traffic and mobility models are also needed along with effective call admission control strategies all of these topics are covered herein finally this book considers future 3g and 4g wireless systems and highlights the critical challenges that must be overcome to make these systems a commercial reality multiaccess mobility and teletraffic for wireless communications volume 5 is an important book for researchers students and professionals working in the area of wireless communications and mobile computing

over the last thirty years or so there have been tremendous advancements in the area of geospatial health however somehow two

aspects have not received as much attention as they should have received these are a limitations of different spatial analytical tools and b progress in making geospatial environmental exposure data available for advanced health science research and for medical practice this edited volume addresses those two less explored areas of geospatial health with augmented discussions on the theories methodologies and limitations of contemporary geospatial technologies in a wide range of applications related to human well being and health in 20 chapters readers are presented with an up to date assessment of geospatial technologies with an emphasis on understanding general geospatial principles and methodologies that are often overlooked in the research literature as a result this book will be of interest to both newcomers and experts in geospatial analysis and will appeal to students and researchers engaged in studying human well being and health chapters are presenting new concepts new analytical methods and contemporary applications within the framework of geospatial applications in human well being and health the topics addressed by the various chapter authors include analytical approaches newer areas of geospatial health application introduction to unique resources geospatial modeling and environmental pollution assessments for air water and soil although geospatial experts are expected to be the primary readers this book is designed in such a way so that the public health professionals environmental health scientists and clinicians also find it useful with or without any familiarity with geospatial analysis

online encyclopedia dedicated to telecommunications for electrical engineers topics include optical communications modulation and demodulation coding and decoding communication networks and antennas regular updates
