The understanding of brain functions at the molecular level has been one of the greatest challenges for man up to now. The basis of its most important functions, including the development of consciousness and personality and the mechanism of learning and memory, remains unknown. However, the pace of discovery at the morphological, cellular, neurophysiological, and molecular levels of brain functions has been quite rapid in the past decades. Neuroscience has therefore been an ever-advancing and extremely fascinating field of research which has made a significant contribution to our understanding of brain structure, chemistry, and function. This book gives a concise synopsis of our present-day knowledge of the basic chemical principles of how the brain works and how the brain develops. It is quite an intelligible approach to ordering the tremendous amount of knowledge accumulated so far in various research fields, particularly neurochemistry. Special emphasis has been given to the chemical language of many aspects of brain development as related to morphology and function. The final part is devoted to the plasticity of the brain and the impact of malnutrition and environment in early life on the development of mental functions. Particularly valuable are the many references to original literature, especially when controversial issues are discussed. The book is well written in an easily understandable manner and would be of great help to all students and scientists interested in the extensive and demanding field of neuroscience.

In September 1976, the International Federation for Cell Biology held its first congress in Boston. On this occasion, Berlin was chosen as the site for the next congress. This meant an acknowledgement and at the same time a heavy burden for the still young European Cell Biology Organization, which represents a junction of European societies and groups for cell biology. In practical terms, this meant that the members of the young and compared to the American Society for Cell Biology, small German Society for Cell Biology had to do a good deal of the organizing of the cell biology congress. This is an opportunity for me, as chairman of the organizing committee, and also on behalf of the German Society for Cell Biology, to express my gratitude to all those who have actively participated in the preparations for this cell biology congress. The success of the congress in Berlin was to a significant extent due to their work. In particular, I would like to especially thank the Secretary General of ECBO, Werner Franke, Heidelberg, as well as the chairman of the local organizing committee, Peter Giesbrecht, Berlin, for the excellent job they did. The congress in Berlin proved to be significantly larger than that in Boston in 1976. The number of abstracts increased from 1200 to more than 1800. They have been published in the European Journal of Cell Biology. In a similar way, the number of symposia and workshops expanded.
