one of this book s main themes is how god s book of nature is concordant with his book of scripture in their writings many of the pioneers of the scientific revolution often referred to god s two books these brilliant naturalists were also devout christians but that was back then is modern science actually compatible with scripture more to the point are the findings of 21st century science concordant with the genesis creation story what else does the text of genesis 1 2 have to say while making an honest effort to answer those questions some vitally important theological concepts which were introduced by moses in the first two chapters of genesis are also examined and discussed in this volume this comprehensive study on how modern science is concordant with the intended meaning of the text of genesis 1 2 has many useful features including the following much of the first two parts of the book consists of background material on 1 logic 2 history and philosophy of science and 3 scientific method as well as 4 basic geological principles 5 descriptions of plate tectonic theory and 6 the principles and methods of radiometric dating this background material is designed to help the reader to understand the implications of the empirical evidence presented in part two god s book of nature similarly there is

the present book aims at clarifying various aspects of indian philosophy by applying concepts used in text science towards their analysis text science attempts to establish universal rules which apply to all forms of human expression if we regard all human expression including behaviour as communication it contains a meaning system whether it has the form of language or not the human expression may be classified as language figure body action and so forth we consider all these forms of expression to be texts for which there must apply universal rules the aim of text science is to explain how these rules function throughout various types of texts and thus provide a better understanding of human behaviour here the direction of analysis is from context to text it is also possible to move from the text it is also possible to move from text to context we can arrive at a new context from texts such as commentaries which context cannot be discovered through reading only one of those texts such a context will certainly help us coherently interpret other texts related to the texts the concept of context and these two directions of analysis may not be necessarily new tools to scholars of indian studies who often adopt this method unconsciously however we aim to use this method consciously here it is an

underlying principle of this book that in order to understand texts written in sanskrit or other languages we need to turn our attention towards factors outside of them such as information provided by other areas of study which factors we call context
