the present volume comprises the contributions of some of the participants of the nato advance studies institute turbulence weak and strong held in cargese in august 1994 more than 70 scientists from seniors to young students have joined to gether to discuss and review new and not so new ideas and developments in the study of turbulence one of the objectives of the school was to incorporate in the same meeting two aspects of turbulence which are obviously linked and which are often treated sep arately fully developed turbulence in two and three dimensions and weak turbulence essentially one and two dimensional systems the idea of preparing a dictionary rather than ordinary proceedings started from the feeling that the terminology of turbulence includes many long technical poorly evocative words which are usually not understood by people exterior to the field and which might be worth explaining students who start working in the field of turbulence face a sort of curious situation on one side they are aware that turbulence is related to the disordered churning flows of torrents the pow erful movements of water in the oceans the violent jet streams in the troposphere the solar eruptions and they are certainly excited to pierce the mystery of this fascinating omnipresent phenomenon

proceedings of a symposium on structural safety studies at the asce convention held in denver colorado may 1 2 1985 sponsored by the committee on structural safety and reliability of the structural engineering division of asce this collection contains 14 papers focusing on safety aspect of

structures the complexities of many current projects and the increasing attention to existing infrastructures often require reevaluation of structural safety during the lifetime of a particular structure in so doing it is necessary to idealize complex natural phenomena such idealized models require frequent updating and improvement these papers introduce relatively new concepts and methods to the structural engineering community topics include human errors random vibration structural damage finite element methods structural optimization evaluation of structures earthquake and wind effects elastic foundations design loads risk assessment and bridge inspection

publishes papers that report results of research in statistical physics plasmas fluids and related interdisciplinary topics there are sections on 1 methods of statistical physics 2 classical fluids 3 liquid crystals 4 diffusion limited aggregation and dendritic growth 5 biological physics 6 plasma physics 7 physics of beams 8 classical physics including nonlinear media and 9 computational physics

in this volume the problems of pattern formation in physics chemistry and other related fields in complex and nonlinear dissipative systems are studied main subjects discussed are formation mechanisms properties statistics characterization and dynamics of periodic and nonperiodic patterns in the electrohydrodynamics in liquid crystals rayleigh benard convection crystallization viscous fingering and belousov zhabotinsky chemical reaction recent developments in topological and defect mediated chaos chaos in systems with large degrees of freedom and turbulence turbulence transitions are also discussed
