for more than forty years jan gehl has helped to transform urban environments around the world based on his research into the ways people actually use or could use the spaces where they live and work in this revolutionary book gehl presents his latest work creating or recreating cityscapes on a human scale he clearly explains the methods and tools he uses to reconfigure unworkable cityscapes into the landscapes he believes they should be cities for people taking into account changing demographics and changing lifestyles gehl emphasizes four human issues that he sees as essential to successful city planning he explains how to develop cities that are lively

safe sustainable and healthy focusing on these issues leads gehl to think of even the largest city on a very small scale for gehl the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train this small scale view he argues is too frequently neglected in contemporary projects in a final chapter gehl makes a plea for city planning on a human scale in the fast growing cities of developing countries a toolbox presenting key principles overviews of methods and keyword lists concludes the book the book is extensively illustrated with over 700 photos and drawings of examples from gehl s work around the globe

how do we accommodate a growing urban population in a way that is sustainable equitable and inviting this question is becoming increasingly urgent to answer as we face diminishing fossil fuel resources and the effects of a changing climate while global cities continue to compete to be the most vibrant centers of culture knowledge and finance jan gehl has been examining this question since the 1960s when few urban designers or planners were thinking about designing cities for people but given the unpredictable complex and ephemeral nature of life in cities how can we best design public infrastructure vital to cities for getting from place to place or staying in place for human use studying city life and understanding the factors that encourage or discourage use is the key to designing inviting public space in how to study public life jan gehl and birgitte svarre draw from their combined experience of over 50 years to provide a history of public life study as well as methods and tools necessary to recapture city life as an important planning dimension this type of systematic study began in earnest in the 1960s when several researchers and journalists on different continents criticized urban planning for having forgotten life in the city city life studies provide knowledge about human behavior in the built environment in an attempt to put it on an equal footing with knowledge about urban elements such as buildings and transport systems studies can be used as input in the decision making process as part of overall planning or in designing individual projects such as streets squares or parks the original goal is still the goal today to recapture city life as an important planning dimension anyone interested in improving city life will find inspiration tools and examples in this invaluable guide

the first danish language version of this book published in 1971 was very much a protest against the functionalistic principles for planning cities and residential areas that prevailed during that period the book carried an appeal to show concern for the people who were to move about between buildings and it urged an understanding of the subtle almost indefinable but definite qualities which have always related to the interaction of people in public spaces and it pointed to the life between buildings as a dimension of architecture that needs to be carefully treated now 40 years later many architectural trends and ideologies have passed by over the years these intervening years have also shown that the liveliness and liveability of cities and residential areas continues to be a important issue the intensity in which fine public spaces are used at this point in time as well as the greatly increased general interest in the quality of cities and their public spaces emphasises this point the character of life between buildings changes with changes in any given social context but the essential principles and quality criteria to be employed when working with life between buildings has proven to be remarkably constant though this work over the years has been updated and revised several times this version bears little resemblance with the very early versions however there was no reason to change the basic message take good care of the life between your buildings

based on materials from the project new tendencies in public space architecture conducted at the school of architecture royal danish academy of arts

drawing from research and examples about resilient cities this book looks at new initiatives and innovations cities can implement
