sent alone to china by the london missionary society in 1807 robert morrison 1782 1834 was one of the earliest protestant missionaries in east asia during some 27 years in china macau and malacca he worked as a translator for the east india company and founded an academy for converts and missionaries independently he translated the new testament into chinese and compiled the first chinese english dictionary in the process he was building the foundation of chinese protestant christianity this book critically explores the preparations and strategies behind this first protestant mission to china it argues that whilst introducing protestantism into china morrison worked to a standard template developed by his tutor david bogue at the gosport academy in england by examining this template alongside morrison s archival collections the book demonstrates the many ways in which morrison s influential mission must be seen within the historical and ideological contexts of british evangelism the result is this new interpretation of the beginnings of protestant christianity in china

mary dalrymple provides a theory of the syntax of anaphoric binding couched in the framework of lexical functional grammar cross linguistically anaphoric elements vary a great deal one finds long and short distance reflexives sometimes within the same language pronominals may require local noncoreference or coreference only with nonsubjects analyses of the syntax of anaphoric binding which have attempted to fit all languages into the mold of english are inadequate to account for the rich range of syntactic constraints that are attested how then can the cross linguistic regularities exhibited by anaphoric elements be captured while at the same time accounting for the diversity that is found dalrymple shows that syntactic constraints on anaphoric binding can be expressed in terms of just three grammatical concepts subject predicate and tense these concepts define a set of complex constraints combinations of which interact to predict the wide range of universally available syntactic conditions that anaphoric elements obey mary dalrymple is a member of the research staff of the natural language theory and technology group at the xerox palo alto research center

this book focuses on the probabilistic theory of brownian motion this is a good topic to center a discussion around because brownian motion is in the intersection of many fundamental classes of processes it is a continuous martingale a gaussian process a markov process or more specifically a process with independent increments it can actually be defined up to simple transformations as the real valued centered process with independent increments and continuous paths it is therefore no surprise that a vast array of techniques may be successfully applied to its study and we consequently chose to organize the book in the following way after a first chapter where brownian motion is introduced each of the following ones is devoted to a new technique or notion and to some of its applications to brownian motion among these techniques two are of paramount importance stochastic calculus the use of which pervades the whole book and the powerful excursion theory both of which are introduced in a self

contained fashion and with a minimum of apparatus they have made much easier the proofs of many results found in the epoch making book of itö and mckean diffusion processes and their sampie paths springer 1965
