topics in atomic collision theory originated in a course of graduate lectures given at the university of colorado and at university college in london it is recommended for students in

physics and related fields who are interested in the application of quantum scattering theory to low energy atomic collision phenomena no attention is given to the electromagnetic nuclear or elementary particle domains the book is organized into three parts static field scattering electron atom collisions and atom atom collisions these are in the order of increasing physical complexity and hence necessarily in the order of decreasing mathematical tractability the topics and methods selected were those which contributed most significantly to the understanding of the physics and the calculation of reliable cross sections the attempt has been made to treat each of the sections in a complete and self contained manner the limited scope of this book has unfortunately made it necessary to omit discussion of many promising methods

this book gives a systematic description of collision theory within the framework of non relativistic quantum mechanics however the final expressions obtained can also hold for particles with spin and under relativistic conditions the general theory is formulated for two elementary particles for the scattering of an elementary particle with a bound system of elementary particles and for the scattering process for a three particle system faddeev s theory in addition the scattering problems are considered using exact and approximation methods
