norbert wiener perhaps better than anyone else understood the intimate and delicate relationship between control and communication that messages intended as commands do not necessarily differ from those intended simply as facts wiener noted the paradox when the modem computer was hardly more than a laboratory curiosity thirty years later the same paradox is at the heart of a severe identity crisis which confronts computer programmers are they primarily members of management acting as foremen whose task it is to ensure that orders emanating from executive suites are faithfully translated into comprehensible messages or are they perhaps simply engineers preoccupied with the technical difficulties of relating software to hardware and vice versa are they aware furthermore of the degree to which their work whether as manager or engineer routinizes the work of others and thereby helps shape the structure of social class relationships i doubt that many of us who lived through the first heady and frantic years of software development at places like the rand and system development corporations ever took time to think about such questions the science fiction like setting of mysterious machines blinking lights and torrents of numbers served to awe outsiders who could only marvel at the complexity of it all we were insiders who constituted a secret society into which only initiates were welcome so today i marvel at the boundless audacity of a rank outsider in writing a book like programmers and managers
