a foreword is usually prepared by someone who knows the author or who knows enough to provide additional insight on the purpose of the work when asked to write this foreword i had no problem with what i wanted to say about the work or

the author i did however wonder why people read a foreword it is probably of value to know the background of the writer of a book it is probably also of value to know the background of the individual who is commenting on the work i consider myself a good friend of the author and when i was asked to write a few words i felt honored to provide my view of ray prasad his expertise and the contribution that he has made to our industry this book is about the industry its technology and its struggle to learn and compete in a global market bursting with new ideas to satisfy a voracious appetite for new and innovative electronic products i had the good fortune to be there at the beginning or almost and have witnessed the growth and excitement in the opportunities and challenges afforded the electronic industries engineering and manufacturing talents in a few years my involve ment will span half a century

the effect of fast neutron 1 mev irradiation on the mechanical properties of structural metals and alloys was studied although the yield strengths and ultimate tensile strengths are increased su stantially for most materials the ductility suffers severe decreases this report presents these changes in properties of several structural metals for a number of neutron exposures within the 10×10^0 to the 18^{th} power to 50×10^0 to the 21^{st} power $n \text{ sq cm}$ range data summarizing these effects on several classes of materials such as carbon steels low alloy steels stainless steels zr base alloys ni base alloys al base alloys and ta are given additional data which show the influence f irradiation temperatures and of post irradiation annealing on the radiation induced property changes are also given and discussed increases as great as 175 in yield strength 100 in ultimate strength and decreases of 80 in total elongation are reported for fast neutron exposures as great as 5×10^0 to the 21^{st} power $n \text{ sq cm}$ author

joining of materials and structures is the first and only complete and highly readable treatment of the options for joining conventional materials and the structures they comprise in conventional and unconventional ways and for joining emerging materials and structures in novel ways joining by mechanical fasteners integral designed or formed in features adhesives welding brazing soldering thermal spraying and hybrid processes are addressed as processes and technologies as are issues associated with the joining of metals ceramics including cement and concrete glass plastics and composites including wood as well as for the first time anywhere living tissue while focused on materials issues issues related to joint design production processing quality assurance process economics and joint performance in service are not ignored the book is written for engineers from an in training student to a seasoned practitioner by an engineer who chose to teach after years of practice by reading and referring to this book

the solutions to joining problems will be within one's grasp. Key features: unprecedented coverage of all joining options from lashings to lasers in 10 chapters; uniquely complete coverage of all materials including living tissues in 6 chapters; richly illustrated with 76 photographs and 233 illustrations or plots; practice questions and problems for use as a text or for reviewing to aid for comprehension; coverage of all of major joining technologies including welding, soldering, brazing, adhesive and cement bonding, pressure fusion, riveting, bolting, snap fits, and more, organized by both joining techniques and materials types including metals, non-metals, ceramics, and glasses, composites, biomaterials, and living tissue; an ideal reference for design engineers, students, package and product designers, manufacturers, machinists, materials scientists.

Focusing on the uses of lead in pure or alloy form for engineering applications, this text presents data on the physical, mechanical, corrosive, acoustic damping, and nuclear properties of lead and lead alloys. It organizes information according to alloy type in tables, graphs, and text, and examines the processing of commercially available lead products including casting, rolling, extrusion, machining, welding, and mechanical joining techniques.
