using metaheuristics to enhance machine learning techniques has become trendy and has achieved major successes in both supervised classification and regression and unsupervised clustering and rule mining problems furthermore automatically generating programs via metaheuristics as a form of evolutionary computation and swarm intelligence has now gained widespread popularity this book investigates different ways of integrating metaheuristics into machine learning techniques from both theoretical and practical standpoints it explores how metaheuristics can be adapted in order to enhance machine learning tools and presents an overview of the main metaheuristic programming methods moreover real world applications are provided for illustration e g in clustering big data machine health monitoring underwater sonar targets and banking

this book explores the characteristics of tasks in the domain of accounting from therefore the current state of didactic discourse in accounting education was reviewed and based on this a comprehensive category system was developed for analyzing and evaluating accounting tasks this category system can also be used to design new accounting tasks and to improve existing ones furthermore 2 000 accounting tasks from 15 different textbooks published by three austrian publishers were analyzed and evaluated using the category system this significantly expands the

knowledge base regarding the characteristics of tasks in the accounting domain the results of the comprehensive evaluations show that there is potential for improvement in the tasks and that the standards formulated within the category system are currently not being fully met in addition it is concluded that both a change in task culture and curricular reforms and further developments are necessary in current accounting education

this book offers a timely review of cutting edge applications of computational intelligence to business management and financial analysis it covers a wide range of intelligent and optimization techniques reporting in detail on their application to real world problems relating to portfolio management and demand forecasting decision making knowledge acquisition and supply chain scheduling and management

the book is the first book on complex matrix equations including the conjugate of unknown matrices the study of these conjugate matrix equations is motivated by the investigations on stabilization and model reference tracking control for discrete time antilinear systems which are a particular kind of complex system with structure constraints it proposes useful approaches to obtain iterative solutions or explicit solutions for several types of complex conjugate matrix equation it observes that there are some significant differences between the real complex matrix equations and the complex conjugate matrix equations for example the solvability of a real sylvester matrix equation can be characterized by matrix similarity however the solvability of the con sylvester matrix equation in complex conjugate form is related to the concept of con similarity in addition the new concept of conjugate product for complex polynomial matrices is also proposed in order to establish a unified approach for solving a type of complex matrix equation
