this manual of solutions to the problems in kinetics of catalytic reactions has been prepared to assist those who use this book in a teaching function however these solutions should also benefit those outside the classroom who want to apply the principles and concepts that are discussed in the book by studying and observing the approaches used in solving these problems it is very likely that similar applications can be envisioned in different kinetic problems that the investigator might face thus the availability ofthese solutions is a good learning tool for everyone additional details and insight about the solutions provided can be obtained by reading the cited references i have tried to eliminate all errors both conceptual and typographical in these solutions however the probability is high that i have not succeeded completely should any errors of commission or omission be found i would greatly appreciate being informed i can be reached at this email address mvche.engr.psu.edu or mail can be sent to me at 107 fenske laboratory department of chemical engineering the pennsylvania state university university park pa 16802 albert vannice v contents preface v solutions to problems chapter 3 catalyst characterization
