examines the life work of the playwright novelist whose literary stature places him among boll grass frisch as one of the leaders of postwar german literature

translated by jeremy moyle when hegel described the americas as an inferior continent he was repeating a contention that inspired one of the most passionate debates of modern times originally formulated by the eminent natural scientist georges louis leclerc comte de buffon and expanded by the prussian encyclopedist cornelius de pauw this provocative thesis drew heated responses from politicians philosophers publicists and patriots on both sides of the atlantic the ensuing polemic reached its apex in the latter decades of the eighteenth century and is far from extinct today translated into english in 1973 the dispute of the new world is the definitive study of this debate antonello gerbi scrutinizes each contribution to the debate unravels the complex arguments and reveals their inner motivations as the story of the polemic unfolds moving through many disciplines that include biology economics anthropology theology geophysics and poetry it becomes clear that the subject at issue is nothing less than the totality of the old world versus the new and how each viewed the other at a vital turning point in history

ideal for courses in which there is a need for a self paced approach contains student progress checks so that readers may assess their understanding of material

for courses in advanced linear algebra this top selling theorem proof text presents a careful treatment of the principal topics of linear algebra and illustrates the power of the subject through a variety of applications it emphasizes the

symbiotic relationship between linear transformations and matrices but states theorems in the more general infinite dimensional case where appropriate

this superbly presented book itself a classic tribute to the printer's craft gives a synopsis of European work on a scale never previously attempted

In 1933 Paul Klee's work was branded as *entartete Kunst* (degenerate art) by the National Socialists and he was dismissed from his professorial post at the Düsseldorf Academy of Fine Arts. This led him together with his wife Lily to return to his real home of Bern. Here his avant-garde art was not understood and Klee found himself in unasked-for isolation. In 1935 Klee started to suffer from a mysterious disease. The symptoms included changes to the skin and problems with the internal organs. In 1940 Paul Klee died, but it was only 10 years after his death that the illness was actually given the name scleroderma. In a publication about Klee, however, the diagnosis remained mere conjecture. Since his adolescence the dermatologist and venereologist Dr Hans Suter has been fascinated by Paul Klee and his art. And more than 30 years ago this fascination spurred him to commence research into the illness and its influence on the art of Paul Klee's final years. It was due to Dr Suter's meticulous investigations that Klee's illness could be defined as diffuse systemic sclerosis. In this book the author assembles his findings and describes the rare and complex disease in a clear and comprehensible way. Further, he empathetically interprets more than 90 of Klee's late works. The point of view of a dermatologist renders a unique source of information. It provides on one hand new insights into everyday medical practices at the University of Bern in the 1930s which will fascinate doctors and local historians alike. While on the other hand art historians and art lovers will be absorbed by the newly discovered links between Paul Klee's work and his illness.
