rural areas need to fulfil a large variety of functions and to accommodate many activities the complexity of the problems limited funds and the almost irreversible character of some interventions result in a compelling need to evaluate ex ante the effects of alternative solutions for designation of land for measures to develop infrastructure and for soil and water management scenario studies are undertaken to help manage the complexity to place bounds on uncertainties and to create new visions after an overview of the nature variety and scope of scenario studies the book illuminates various european examples and reviews under the following headings regional soil and water management nature development and landscape quality rural planning and the future of regions

this futures book reflects the global trends and events of the recent past of today that are bringing about change to the world s political economic social technological and military environments provides a set of plausible scenarios against which users can build policies and decisions while anticipating and judging their consequences before implementation useful for strategic planning through active and reserve components of the u s military also useful for long range planning by business industry academia and other private and governmental organizations charts tables and drawings also includes a 21 page study creating strategic visions

any alteration of the natural processes occurring on a piece of land will have expected as well as unanticipated effects and those effects have little regard for arbitrary human boundaries consequently it is not enough for land managers to consider only how they might maintain the parcels for which they are responsible they must also anticipate

although the significance of 9 11 is subject to debate it is symbolic of a general sentiment of discontinuity whereby society is vulnerable to undefined and highly disruptive events recent catalysts of this sentiment are eye catching developments such as the sars severe acute respiratory syndrome and bird flu outbreaks the enron and parmalat scandals political assassinations in sweden and the netherlands regime changes in iraq and afghanistan and terrorist attacks in bali istanbul madrid and various parts of the middle east however recent discontinuities should not be seen as evidence that discontinuities occur more frequently now than they did before looking back in history we see that disruptive processes are common for example 25 years ago few europeans would have predicted the upcoming upheavals on their own continent the collapse of communism berlin as the capital of a reunited germany the wars in the former yugoslavia the single european currency and the near doubling of the number of european union member states changes elsewhere have been no less discontinuous and unforeseen the fall of the asian tigers the emergence of the internet and mobile telecommunication and the presidency of nelson mandela societal discontinuity is a relatively new area of concern in policy development since the 1970s the consideration of change and discontinuity has gained some ground over predictive forecasting which tended to reason from continuous developments and linear processes rather than making forecasting the future it has become popular to use scenarios as a manner to consider several possible futures scenarios are coherent descriptions of alternative hypothetical futures that reflect different perspectives on past present and future developments which can serve as a basis for action scenario development aims to combine analytical knowledge with creative thinking in an effort to capture a wide range of possible future developments in a limited

number of outlooks scenario development assumes that the future is uncertain and the directions in which current developments might range from the conventional to the revolutionary in theory scenario development is a way to consider future discontinuity however there are indications that the theoretical promise is not reflected in scenario practice research has shown that scenarios do not consider the idea of discontinuity as a matter of course in our research we found that a scenario study would benefit from efforts to create and foster a culture of curiosity for exploring the future and the possible discontinuities rather than simply commissioning a scenario study to provide insights about the future only then can one read the writing on the wall of future developments

doctoral thesis dissertation from the year 2012 in the subject geography earth science meteorology aeronomy climatology grade with honours course impacts of natural and anthropogenic conditions on the hydrological regime of rivers a narew river basin case study language english abstract the general aim of this thesis is to assess the impact of a multiple set of scenarios describing changes of global and regional scale driving forces on the ecological functions of the flow regime this general aim translates into three more specific research objectives 1 a comprehensive spatial validation of a large scale semi distributed hydrological model to test its ability to assess spatial patterns in impacts on flow regime indicators 2 a broad description of the water requirements of selected river dependent biota and their parametrisation into indicators derivable using hydrological model output 3 a spatially distributed analysis of future impacts on environmental flow indicators under various model scenarios derived from key local stakeholders input as well as based on downscaled projections of global change the research undertaken to fulfil these objectives was carried out as part of a case study of the narew river basin ne poland although it is believed that the findings of this thesis are important especially for the water management of the narew river basin various approaches developed and adapted in this thesis are not limited to this area only but are applicable elsewhere impacts in the present study

are assessed not only on the flow regime as such but also on its ecological functions i e on the environmental flow regime this underlines the novelty of this thesis as going beyond the pure impacts on the flow regime in a scenario modelling framework is rare in hydrological science if achieved at all

in this first comprehensive treatment of the subject richard harrison shows how this theory emerged and developed to become despite radically different political settings and levels of technology essential to the red army s victory over germany in world war ii

this volume in the environment agency science report series features case studies which demonstrate the added value of using large climate model ensembles when assessing climate change impacts on water resources and river ecology and exploring possible adaptation pathways
