this book illustrates the basic ideas of regularity properties of functional equations by simple examples it then treats most of the modern results about regularity of non composite functional equations of several variables in a unified fashion a long introduction highlights the basic ideas for beginners and several applications are also included

updated throughout this revised edition contains 25 new material covering progress made in the field over the past decade

thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling not so today in seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork in this book sarah otto and troy day provide biology students with the tools necessary to both interpret models and to build their

own the book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus and then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models the authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory through examples they describe how models have been used to understand such topics as the spread of hiv chaos the age structure of a country speciation and extinction ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves this innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists a how to guide for developing new mathematical models in biology provides step by step recipes for constructing and analyzing models interesting biological applications explores classical models in ecology and evolution questions at the end of every chapter primers cover important mathematical topics exercises with answers appendixes summarize useful rules labs and advanced material available

prerequisites for reading this volume are an understanding of the topological portions of advanced calculus including the uniform convergence of series standard linear algebra and mathematical maturity at the level of an undergraduate major knowledge of elementary algebraic topology would be useful but is not essential
