parasites that manipulate the behaviour of their hosts represent striking examples of adaptation by natural selection this text provides an authoritative review of host manipulation by parasites that assesses developments in the field and lays out a framework for future research

parasites have evolved independently in numerous animal lineages and they now make up a considerable proportion of the biodiversity of life not only do they impact humans and other animals in fundamental ways but in recent years they have become a powerful model system for the study of ecology and evolution with practical applications in disease prevention here in a thoroughly revised and updated edition of his influential earlier work robert poulin provides an

evolutionary ecologist's view of the biology of parasites he sets forth a comprehensive synthesis of parasite evolutionary ecology integrating information across scales from the features of individual parasites to the dynamics of parasite populations and the structuring of parasite communities evolutionary ecology of parasites presents an evolutionary framework for the study of parasite biology combining theory with empirical examples for a broader understanding of why parasites are as they are and do what they do an up to date synthesis of the field the book is an ideal teaching tool for advanced courses on the subject pointing toward promising directions and setting a research agenda it will also be an invaluable reference for researchers who seek to extend our knowledge of parasite ecology and evolution

increased global travel has facilitated the spread of diseases that were previously restricted in their distribution the fifth edition of this internationally acclaimed book combines over 1 000 outstanding illustrations and expanded authoritative text covering the clinical diagnosis pathology and ecology of all recognized tropical and parasitic diseases

encyclopedia of agriculture and food systems second edition five volume set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face questions it addresses include will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion people expected to inhabit our planet by 2050 will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today's agriculture practices will we be able to produce the additional food using less land and water than we use now these are among the most important challenges that face our planet in the coming decades the broad themes of food systems and people agriculture and the environment the science of agriculture agricultural products and agricultural production systems are covered in more than 200 separate chapters of this work the book provides information that serves as the foundation for discussion of the food and environment challenges of the world an international group of highly respected authors addresses these issues from a global perspective and provides the background references and linkages for further exploration of each of topics of this comprehensive work addresses important challenges of sustainability and efficiency from a global perspective takes a detailed look at the important issues affecting the agricultural and food industries today full colour throughout

this book is a survey of the important features of human strongyloidiasis a major pathogen which infects millions of people around the globe consideration of the parasite and the disease it produces is broad and in depth ranging from basic parasitology to practical management

the phenomena involved in infections of man and domestic animals with metazoan or protozoan parasites present formidable practical problems as well as a

theoretical challenge to immunologists molecular biologists and evolutionary biologists with respect to the public health and economic problems malaria for example remains a major health problem with approximately 200 million people being infected yearly and on the basis of world health organization estimates more than 1 million children die each year of malaria infections chapter 4 this volume addresses state of the art immunologic approaches to the development of vaccines for parasitic diseases chapter 9 and analyses of studies bearing on the antigenic characterization of protozoan and metazoan parasites chapters 4 5 and 7 on investigations of the role of precise mechanisms underlying natural resistance or non permissiveness of the host to parasitic infections chapters 1 2 and 12 on induced mechanisms including the generation of parasite specific t cell lines and clones chapter 6 and on the generation of monoclonal antibodies chapters 4 and 5 to parasite antigens of distinct developmental stages great progress has been made in characterizing parasite antigens capable of inducing a protective response in the vaccinated host further progress in this area strongly depends on biochemistry and molecular biology with the long term goal of synthesizing such antigens chemically or producing them by means of recombinant dna technology chapter 4
