in the engineering community the handling of powders and bulk solids is called bulk solids technology being at least in germany part of mechanical process engineering process engineering involves study of the change and transformation of material properties if mechanical processes are used for this transformation the engineering discipline is called mechanical process engineering the best known unit operations of mechanical process engineering are grinding agglomeration mixing and separation due to the mechanical treatment the particles either single particles or a collection of particles increase in value to profit from this value increase industry and academia perform research and development when handling bulk solids e.g. storing dosing and conveying no value increase can be achieved because the material properties are not changed what can be achieved is at most the elimination of problems which is less interesting research and development compared to the development of new products or processes with the chance to obtain a patent a silo for the intermediate storage of bulk solids often seems to be only a single unimportant element for the realization of a larger process bulk solid is filled into the silo continuously or discontinuously and discharged later at predetermined points of time in desired quantities that is not always unproblematic the known problems of arching and ratholing can lead to irregular discharge or complete blockage

a comprehensive overview of stormwater and wastewater collection methods from around the world written by leading experts in the field includes detailed analysis of system designs operation maintenance and rehabilitation the most complete reference available on the subject

completely updated the sixth edition provides engineers with an in depth look at the key concepts in the field it incorporates new discussions on emerging areas of heat transfer discussing technologies that are related to nanotechnology biomedical engineering and alternative energy the example problems are also updated to better show how to apply the material and as engineers follow the rigorous and systematic problem solving methodology they will gain an appreciation for the richness and beauty of the discipline

universal design is a process for creating an equitable and sustainable society it is a concept committed to recognizing and accepting

each individual's potential and characteristics and promoting the realization of a built environment that does not stigmatize users but enables everyone to participate fully in their community. This book presents 32 articles from the 5th international conference on universal design. Previous universal design conferences have been organized biennially but the 2020 conference was postponed due to COVID-19 restrictions and eventually held online from 9-11 June 2021. This conference brings together a multidisciplinary group of experts from around the world to share knowledge and best practice with the common goal of shaping the way we design, avoiding stereotyped or discriminatory views and solutions that could stigmatize particular groups of people. The articles are organized into chapters under seven broad themes: universal design and inclusive design; user experience and co-design; access to education and learning; environment; web accessibility and usability of technology; architecture and the built environment; mobility and transport; and designing for older people. The current situation has highlighted not only the importance of web accessibility, the user-friendliness of interfaces, and remote connections during the last year, the importance and quality of our daily living environment, access to services, and green space has also become ever more obvious. This book will be of particular interest to those working to enable all those with disabilities or impairments to live independently and participate fully in all aspects of life.
