why did the economists of the so called mainstream seem to fail to foresee the global economic crisis that exploded in 2008 and why do they appear to have difficulty in putting forward an interpretation of it that is consistent with the theoretical foundations of their models these two questions have echoed insistently since the outbreak of the crisis not only in academic circles but also in the mass media and appear to reflect increasingly widespread dissatisfaction with the dominant paradigm of economic theory many believe that the global recession now underway may constitute an historic watershed for the evolution of economics and therefore that an authentic change of paradigm is called for rather than only minor adjustments to the dominant approach since the start of the crisis there has indeed been a profusion of contributions from alternative areas of economic study and in particular from those adopting a critical stance with respect to mainstream economic theory this collection puts forward promising reinterpretations of the primary schools of heterodox political economy stringent critiques of the conventional readings of the recession new schemes of theoretical and empirical analysis of the crisis and proposals for economic policies alternative to those hitherto adopted this book contains a selection of some of the most recent contributions to the critique of mainstream economic theory and policy and discusses the origins and possible evolutions of the current economic crisis the collection should be of interest to students and researchers focussing on macroeconomics monetary economics political economy and financial economics

because the number of options is often limited small island states tend to find it uncommonly difficult to strike a balance between population environment and development relatively high population density and small land areas without much in the way of natural resources do not provide the best of circumstances for improving the living conditions of the population especially a fast growing one the result is often stunted economic development and environmental stress both on land and offshore the developments in the island state of mauritius over the past 30 years however can serve as an inspiration and illustration of how extremely adverse conditions can be overcome in the early 1960s mauritius was trying to cope with rapid population growth extreme poverty and grim economic prospects population density was 324 inhabitants per km total fertility was 5.7 and gnp per capita was less than 200 in 1990 the situation in mauritius was radically different although population density had increased to 527 inhabitants per km total fertility had dropped to 2.0 and gnp per capita had increased to 2,310 economic stagnation had been replaced by steady growth and full employment and environmental problems were being addressed as issues of high priority

in this collection international governance regimes and globalization the writers explore international relations and

globalization by using specific examples from beijing and taipei in december 1949 when china was politically divided the people s republic of china prc central government was in control of most resources tangible and intangible for that reason our unit of analysis has to be the state meaning a government or a politically organized body with the rise of civil society at both national and international levels applying the international global governance theory should be closer to reality because we have to look at both the state and non state sponsored dimensions which are more complex and complicated indeed international global governance could become a new school of thought and will continue to expand as academics explore for example neo liberalism primarily focuses on market and contract when people buy and sell something they are in a market in other words politics is the superstructure of economics or as karl marx said what prevails in economy will ultimately prevail in politics in a sense subscribers to this school of thought are marxian however the study of international global governance embraces the non state sponsored dimension hence it is broader than that of the neo liberalism school of thought

anchored in the principles of the free market economics neoliberalism has been associated with such different political leaders as ronald reagan margaret thatcher bill clinton tony blair augusto pinochet and junichiro koizumi in its heyday during the late 1990s neoliberalism emerged as the world s dominant economic paradigm stretching from the anglo american heartlands of capitalism to the former communist bloc all the way to the developing regions of the global south at the dawn of the new century however neoliberalism has been discredited as the global economy built on its principles has been shaken to its core by a financial calamity not seen since the dark years of the 1930s so is neoliberalism doomed or will it regain its former glory will reform minded g 20 leaders embark on a genuine new course or try to claw their way back to the neoliberal glory days of the roaring nineties is there a viable alternative to neoliberalism exploring the origins core claims and considerable variations of neoliberalism this very short introduction offers a concise and accessible introduction to one of the most debated isms of our time about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

this paper develops a dynamic general equilibrium model that explicitly includes a banking sector with a maturity mismatch we demonstrate that despite the perfect competition in the banking sector rational banks take on excessive risks systemically resulting in overleverage and inefficiently high crisis probabilities the model accounts for the banks rational over optimism regarding future capital prices which arises from pecuniary externalities on their own solvency using the model as an example we introduce msr marginal systemic risk as a general measure to assess the macroeconomic exposure to systemic risks 1st prelim p

in this reassessment of new deal policymaking rhonda levine argues that the major constraints upon and catalysts for fdr s policies were rooted in class conflict countering neo marxist and state centred theories which focus on administrative and bureaucratic structures she contends that too little attention has been paid to the effect of class struggle

in a political climate where the machinery of the federal government has grown increasingly complex the power to legislate offers a comprehensive and in depth analysis of the extent and limitations of legislative power granted by the u s constitution by examining the historical development of the constitution as well as judicial precedent set by the supreme court richard e levy develops a systematic account of federal legislative power that is ideal for anyone interested in constitutional history and political science levy focuses his investigation on three distinct yet related aspects of federal legislative power the necessary and proper clause of article i the delegation of powers to the various federal institutions and the deliberative powers of congress to conduct investigations and interrogations the power to legislate synthesizes these three crucial ideas into a fresh perspective that sheds light on today s controversies

in a wide ranging study based on legal history political theory and philosophical ideas going all the way back to plato and roman law robert clinton challenges current faith in an activist judiciary claiming that a human centered constitution leads to government by reductive moral theory and illegitimate judicial review he advocates a return to traditional jurisprudence and a god centered constitution grounded in english common law and its precedents
