predictive modelling for football analytics discusses the most well known models and the main computational tools for the football analytics domain it further introduces the footbayes r package that accompanies the reader through all the examples proposed in the book it aims to be both a practical guide and a theoretical foundation for students data scientists sports analysts and football professionals who wish to understand and apply predictive modelling in a football context key features discusses various modelling strategies and predictive tools related to football analytics introduces algorithms and computational tools to check the models make predictions and visualize the final results showcases some guided examples through the use of the footbayes r package available on cran walks the reader through the full pipeline from data collection and preprocessing through exploratory analysis and feature engineering to advanced modelling techniques and evaluation bridges the gap between raw football data and actionable insights this text is primarily for senior undergraduates graduate students and academic researchers in the fields of mathematics statistics and computer science willing to learn about the football analytics domain although technical in nature the book is designed to be accessible to readers with a background in statistics programming or a strong interest in sports analytics it is well suited for use in academic courses on sports analytics data science projects or professional development within football clubs agencies and media organizations

in the improbability principle the renowned statistician david j hand argues that extraordinarily rare events are anything but in fact they re commonplace not only that we

should all expect to experience a miracle roughly once every month but hand is no believer in superstitions prophecies or the paranormal his definition of miracle is thoroughly rational no mystical or supernatural explanation is necessary to understand why someone is lucky enough to win the lottery twice or is destined to be hit by lightning three times and still survive all we need hand argues is a firm grounding in a powerful set of laws the laws of inevitability of truly large numbers of selection of the probability lever and of near enough together these constitute hand's groundbreaking improbability principle and together they explain why we should not be so surprised to bump into a friend in a foreign country or to come across the same unfamiliar word four times in one day hand wrestles with seemingly less explicable questions as well what the bible and shakespeare have in common why financial crashes are par for the course and why lightning does strike the same place and the same person twice along the way he teaches us how to use the improbability principle in our own lives including how to cash in at a casino and how to recognize when a medicine is truly effective an irresistible adventure into the laws behind chance moments and a trusty guide for understanding the world and universe we live in the improbability principle will transform how you think about serendipity and luck whether it's in the world of business and finance or you're merely sitting in your backyard tossing a ball into the air and wondering where it will land

the book presenting the proceedings of the 2018 future technologies conference ftc 2018 is a remarkable collection of chapters covering a wide range of topics including but not limited to computing electronics artificial intelligence robotics security and communications and their real world applications the conference attracted a total of 503 submissions from pioneering researchers scientists industrial engineers and students from all over the world after a double blind peer review process 173 submissions including 6 poster papers have been selected to be included in these proceedings ftc 2018 successfully brought together technology geniuses in one venue to not only present breakthrough research in future technologies but to also promote practicality and applications and an intra and inter field exchange of ideas in the future computing technologies will play a very important role in the convergence of computing communication and all other computational sciences and applications and as a result it will also influence the future of science engineering industry business law politics culture and medicine providing state of the art intelligent methods and techniques for solving real world problems as well as a vision of the future research this book is a valuable resource for all those interested in this area

ebony is the flagship magazine of johnson publishing founded in 1945 by john h johnson it still maintains the highest global circulation of any african american focused magazine
