*the 1950s was the first great age of the modern kitchen labour saving appliances bright colours and the novelty of fitted units moved the kitchen from dankness into light where it became the domain of the happy housewife and the heart of the home new space age material formica decorated with fashionable patterns topped sleek cupboards that contained new classic wares such as pyrex and homemaker crockery and the ingredients for 1950s staples semolina coronation chicken and spotted dick electricity entered the kitchens of millions and nowhere in the home was modern technology and modern design more evident bold colour clean lines and stainless steel were keynotes of the decade this book a celebration of cooking eating and living in the 1950s kitchen is a feast of nostalgia and a mine of inspiration for anyone wanting to recreate that 50s look in their own home*

*pharmaceutical manufacturing was one of the first industries to recognize the importance of green chemistry with pioneering work including green chemistry metrics and alternative solvents and reagents today other topical factors also have to be taken into consideration such as rapidly depleting resources high energy costs and new legislation this book addresses current challenges in modern green chemical technologies and sustainability thinking it encompasses a broad range of topics covered by the chem21 project europe s largest public private partnership project which aims to develop a toolbox of sustainable technologies for green chemical intermediate manufacture divided into two sections the book first gives an overview of the key green chemistry tools guidance and considerations aimed at developing greener processes before moving on to look at cutting edge synthetic methodologies featuring innovative research this book is an invaluable reference for chemists across academia and industry wanting to further their knowledge and understanding of this important topic*

*renewable energy is important as a substitute for finite fossil fuels and inflexible nuclear power and could conceivably power the world however this is challenging as the world is currently 80 dependent on fossil fuels and renewable sources produce only about 15 of total energy conversion technologies for use with many of the eight different primary sources of renewable energy are only just emerging as viable technologies while renewable energy sources will not run out and their use involves little or no release of carbon dioxide or ionising wastes they do have local environmental impacts of their own this book analyses the nature of environmental impacts from renewable sources a novel method of assessing impacts is explored based on a set of parameters centred on how diffuse or concentrated the energy flow is the approach that is developed will inform engineers designers policy makers and planners as well as researchers in the area*

*advances in battery technologies for electric vehicles provides an in depth look into the research being conducted on the development of more efficient batteries capable of long distance travel the text contains an introductory section on the market for battery and hybrid electric vehicles then thoroughly presents the latest on lithium ion battery technology readers will find sections on battery pack design and management a discussion of the infrastructure required for the creation of a battery powered transport network and coverage of the issues involved with end of life management for these types of batteries provides an in depth look into new research on the development of more efficient long distance travel batteries contains an introductory section on the market for battery and hybrid electric vehicles discusses battery pack design and management and the issues involved with end of life management for these types of batteries*

*fires are a common source of exposure to smoke and a range of toxicologically active chemicals providing a complete overview of the subject this book provides comprehensive and detailed information on combustion processes estimation of rate of production of combustion products dispersion of these products and their effects on health beginning with a chapter discussing the chemistry of combustion and detailing the mechanisms of burning how different materials ignite and the nature of combustion products the book goes on to examine specific combustion products in detail the toxicity and carcinogenicity of the products their dispersion and methods of monitoring with diverse coverage edited and authored by recognised experts in the field this book will provide an essential text for those working in toxicology combustion science public health and environmental research*

*epigenetics is one of the fastest moving fields in drug discovery with almost every large pharmaceutical company and a substantial number of biotechnology companies targeting epigenetic processes to treat diseases ranging from cancer to huntington s disease and from inflammation to sickle cell anaemia the book is structured in three main sections the first section introduces epigenetics and explain its importance at both a phenomenological and molecular level the second section goes on to review how each of the big breakthroughs in drug discovery in this field have developed with a strong emphasis on case histories the final section highlights the ongoing challenges in creating safe and efficacious epigenetic drugs written and edited by experts within the field from both industry and academia this book provides an invaluable guide to this developing field for medicinal chemists working in academia and in the pharmaceutical industry*

*synthetic methods in drug discovery volume 1 focusses on the hugely important area of transition metal mediated methods used in industry current methods of importance such as the suzuki miyaura coupling buchwald hartwig couplings and ch activation are discussed in addition exciting emerging areas such as decarboxylative coupling and the uses of iron and nickel in coupling reactions are also covered this book provides both academic and industrial perspectives on some key reactions giving the reader an excellent overview of the techniques used in modern synthesis reaction types are conveniently framed in the context of their value to industry and the challenges and limitations of methodologies are discussed with relevant illustrative examples edited and authored by leading scientists from both academia and industry this book will be a valuable reference for all chemists involved in drug discovery as well as postgraduate students in medicinal chemistry*

*the incorporation of green chemistry is a relatively new phenomenon in the drug discovery discipline since the scale that chemists operate on in drug discovery is smaller than those of process and manufacturing chemistry the necessary metrics are more difficult to obtain in drug discovery due to the diversity of reactions conducted however pharmaceutical companies are realizing that incorporation of green chemistry techniques at earlier stages of drug development can speed the development of a drug candidate written by experts who have pioneered green chemistry efforts within their own institutions this book provides a practical guide for both academic and industrial labs wanting to know where to start with introducing greener approaches for greatest return on investment the editors have taken a comprehensive approach to the topic covering the entire drug discovery process from molecule conception through synthesis formulation and toxicology with specific examples and case studies where green chemistry strategies have been implemented emerging techniques for performing greener drug discovery chemistry are addressed as well as cutting edge topics like biologics discovery and continuous processing moreover important surrounding issues such as intellectual property are included this book serves as a practical guide for both academic and industrial chemists who work across the breadth of the drug discovery discipline ultimately readers will learn how to incorporate green chemistry strategies into their everyday workflow without slowing down their science*
